

Liners for IBC's and Tote Tanks

Reducing the costs of intermediate storage & distribution

IBC liners can eliminate bottle replacement and also expensive and often inadequate bottle cleansing, labour costs and waste water charges can also be dramatically reduced. When the liner is removed from the IBC every last drop of product can be discharged which can add up to a sizeable saving.

With changes in legislation enforcing companies to become ever greener our liners enable the IBC to be used again and again meaning that IBC's do not have to be shredded to become landfill. The liner material can be easily recycled which helps to reduce your company's carbon footprint.

The use of an IBC liner guarantees that the interior of your IBC will be free from any contamination from previous use or detergent residue left from cleaning. The liner film provides a virgin surface for the IBC interior, an important concern were container hygiene is paramount.

Benefits:

- Cost effective
- Quick to install
- Reduces potential contamination
- UN approved
- Carbon footprint greatly reduced
- Designed to fit any commercially available IBC or tote tank perfectly

Material:

- Resistant to all mainstream chemicals / solvents
- 3 film options: anti-static, FDA approved & UV sensitive
- Enhanced heat resistance
